Framing hammer vs nail gun

It is not uncommon for home improvement rookies to experience a slight panic when trying a project that includes a hammer and nails. Fingers somehow always get smashed, and suddenly, the project doesn't seem to matter anymore. But with this trick, you don't have to sacrifice your numbers if you want to hang some photos. Watch the video below to learn our super easy techniques and you will be hammering away fearlessly in no time. Whether you're working on a larger project or you're a DIY newbie trying smaller indoor home projects, learning these three ways to safely hammer the nail will help you get the job done faster. Watch the video above to learn how to (safely) hammer a nail. Clothespin is all you will need to ensure that you never accidentally hammer your fingers again. With your hammer nearby, use a clothespin to clamp the nail so that the nail tip is poking out one side of the clothespin. Place the clothespin against the wall, then start hammering. The nail should begin to go to the wall seamlessly. Hammer until you reach the desired length of nail sticking out of the wall, then unclamp clothespin. If your nail doesn't go anywhere as you hammer, it's possible that you're clamping the clothespin around the nail too tightly. The goal here is to use a clothespin to hold the nail in place until it enters the wall so that your fingers don't have to do the job. Just put, you remove your fingers from the hammer area, holding the other end of the clothespin. The best part? Clothespin can be used more and more, works with a nail of any size, and is super portable. We get it. If you don't have a line drying your clothes (or crafting with your kids), you may not be clothespin handy. Here are some other ways to keep your finger safe from smashing. Most people have a sponge lying around, and this common household item can easily act as a buffer between the hammer and fingers. Before you try this trick, keep in mind that the best type of sponge for this project is one that is soft on both sides to avoid sponges with a scrubbing surface. Poke the nail through the sponge, and hold it in place against the spot on the wall that you want the nail to go. Start hammering until the nail is as deep in the wall as expected, then quickly rip the sponge off. If you want your fingers to be as far from the hammer as possible, you can use a strip of cardboard hammer nail. In the short end opposite the end you want to hold, use scissors to make an incision in cardboard, and put the nail inside. It should be cozy against the sides of the cut, so make sure you're not stretching or bending the cardboard until you cut. Hammer and then pull the cardboard away. Although all three methods are effective to ensure that you don't lose the nail that improves your space, clothespin is the best way to go in our view. Unlike sponge, you can use clothespin over and over, which is great because you're will need a hammer more than once in your lifetime. Plus, tossing out a sponge after ripping it out of the nail isn't exactly eco-conscious or budget friendly. And although the cardboard can be reused, it takes a few additional steps to prepare it. First, the clothespin is easily portable so you can stick it in your pocket and take it with you all around the house. It's time to pin your forging fear and your DIY project. When you master one of the three methods described above, you wonder why you haven't tried them before. This site is not available in your country Our editors independently explore, test and recommend the best products; You can learn more about our review process here. We may receive commissions for purchases made from our chosen links. If you need to pound with a couple of nails, a hammer is the fastest and easiest way to get the job done. But when you face a lot of nails, maybe you're erecting a fence, reroofing your home, or building a deck you'll find that nail gun, whether it's powered by air, battery, or electricity gets the job done much faster and with much less stress to your hands, hands and shoulders. There are many nail guns out there and several different types, so we research you and rounded up the best options in the categories likeliest to be interested in DIYers. Here are the best nail guns on the market now: A good nail gun would be easy to use, last lasting, and drive the nail quickly and cleanly without any questions. To do this, the nail gun must be a tough build and a lot of options you can customize while working. DeWalt DWFP12231 checks all these boxes as the top choice in this list. It provides a lot of strength from its magnesium body and maintenance-free drive motor. It is also designed to be lightweight and safe to use with a sequential style trigger and rear exhaust vent that keeps harmful pollutants away from you. The nail gun runs off of a separate air compressor/hose and uses 18 meter nails ranging from 5/8-2 inches long. It has 100 nail work capabilities and plenty of options to customize the way you use the tool. You can control the depth of the nails with a simple correction of tools. If you don't use it, the gun also comes with an adjustable belt hook to keep the tool hanging on your side of your reach. If you want more hassle-free options, the Porter-Cable PCC790LA provides much the same functionality as other competitors. Typically, battery-powered nail guns don't offer as much punch as they do using air compressors and hoses, but for projects that use softer materials or shallower depths, a battery-powered nail gun is the way to go. Just charge the battery, put it in the nail gun and you're ready to go. The nail gun is designed around comfort and transferability. In addition to the wireless design, the weight of the instrument is centered at the handle, which will reduce hand fatigue Projects. All adjustments to the total correction depth adjustment and jam levers are without tools. 100 nail magazine uses 18 meter nails. Budget nail guns tend to be smaller and more portable. While you save money, you can also save on weight with a 3 pound WEN 61721. Designed to fire 18-gauge brads 3/8 inches to 2 inches in length, this nail gun is a good starter or secondary gun if you're looking to expand. The gun works with any air compressor and can operate anywhere from 60 to 115 PSI, ensuring you have enough power to guide the nail down into difficult materials. For extra comfort, the pistol has an ergonomic rubber handle built directly into the handle. The rubber absorbs the shock that courses up the nail gun with each shot, preventing the energy from getting into your hand. This helps reduce fatigue while protecting your arm and wrist from injuries. NuMax S2-118G2 is proof that some budget options don't always skip out on more professional functions. One common feature of many expensive nail guns on offer is the ability to use several types of nails and brads. For a fraction of the cost, this gun gives you similar flexibility. Using either a total 2-inch 18 gauge or 1 5/8 inch narrow staples, you can choose the right anchorage to work right on the fly. Another professional feature this gun involves is a no-mar tip. When working on delicate surfaces, this tip prevents the gun from digging and doing great damage. Typically, it is necessary when nailing into fragile materials such as decorative decorations, baseboards and various types of molding. Beyond the simpler design, electric nail guns also offer a quick way to create and get going because you don't have to connect three separate pieces together. Stanley's TRE550Z uses the flexibility of electric drives using either Stanley Sharpshooter staples or various brads. You can choose the type and length of the fastener to use depending on the requirements of your specific project. The gun is powered by an eight-foot wire. Although this may limit mobility, if you do not use an extension cord, it provides a constant flow of energy, so you will not run out of juice during working hours. The gun also uses a dual power setting lever so you can switch between high and low to use with either hard or soft material. While most pneumatic nail guns will work with any air compressor, it can be easier for the wallet if everything comes together. A combo kit like Bostitch BTFP3KIT will give you everything you need to get going with your fastening project. You will get three guns along with an air compressor and a tank. Pistols use a total 18-meter or 16-meter nails, ranging from different lengths to 2 inches. One gun can also be used for large crown staples for things like furniture coverings. The air supply starts with a 150 max PSI six gallon tank. Air compressor pumps with a constant 90 PSI. Together, you have enough power, drive nails and clamps on most hard surfaces. Dial back into the air with less force when working with softer materials. A top-notch, professional-level nail gun will give you more flexibility and flexibility while standing up to the typical abuse a larger project has to offer. Bostitch F21PL allows you to quickly and easily change device settings and accessories. For large projects, such as house construction, it has two quick changes in the noses of wood or metal connectors. The push-button depth guide also allows you to quickly set the desired depth as you move. Connected to an air compressor of your choice, the gun has a working range of 80-120 PSI, which is more than enough for hard surfaces, such as regular metals. At the max, the gun can deliver up to 1,050 inches of force through a 60-nail magazine. No one said you only have to stick with one nail gun to get the job done. Sometimes, it is better to have different options on your side so you can do the best job on the project. Instead of buying two or three separate nail guns, the Freeman P4FRFNCB gives you four different rifles all designed with the same build quality and functionality. Each gun is designed with a different purpose in mind: full-head shots for home construction, angular finishing tight corner construction, a crown stapler for delicate projects, and a general nail gun for other types of projects. The range of choices means that you will have something you need in one canvas bag. The overall purpose of angler guns is useful for cabinetry, crown slats, and baseboards. Crown stapler is a common tool for decorative projects such as picture frames, decoration, fabrics and other art and craft projects. Final verdict It's tough and durable, lightweight, and pounds nail after nail after nail without breaking sweat or making you sweat while addressing the most DIY projects around the house or yard. That's why DeWalt DWFP12231 nail gun (available on Amazon) is our top choice. But if you need the kind of power, ease of use, and useful features only a professional tool can provide, turn in place of the Bostitch F21PL nail gun (available on Amazon). (e.g. Amazon).
